Research

Deep BSDEs for Mean-Field Market Making Durham University

Durham, United Kingdom
2026 – MSc Dissertation

- Built **models for pricing and quoting** in a competitive market-making game (Cont-Xiong) under inventory risk and mean-field competition; validated to 0.135% spread error vs an exact benchmark and scaled to ~5,000 agents.
- 20-seed multi-agent-RL (MADDPG) **trading-strategy** study: learned spreads exceed the cartel level ($t=3.22$, $p=0.0022$) — an algorithmic-collusion finding with market-surveillance relevance (FCA/PRA/SR 11-7).
- Engineered the population/competition features naive networks suppress (three fixed failure modes, 26-experiment validation); error theory machine-checked in Lean 4 / Mathlib (~36k LOC).

Silicon Carbide JFET CPU MEng Dissertation (84%)

Durham, United Kingdom
Oct 2023 – Apr 2024

- Designed and simulated a 4-bit CPU in SiC JFET logic (LTspice) for extreme-temperature/radiation computing.
- Built the full verification toolchain — C++ compiler, assembler, Python automation, emulator-parity + waveform-to-state checks.

Education

MSc Scientific Computing & Data Analysis (AI for Engineering) Durham University

Durham, United Kingdom
Sep 2025 – Exp. Sep 2026

- Tracking Distinction — average ~86% (95% performance/GPU, 94% machine learning & statistics, ~89% advanced Bayesian ML).
- **Relevant:** Bayesian statistics (MCMC, Gaussian processes), **time-series & regression** (incl. a high-dimensional survival regression), convex optimisation (duality, KKT), GPU/HPC. Python, C, R.

University of Illinois Urbana-Champaign — Mathematics Modules (NetMath, online)

Apr 2026 – Dec 2026

- **MATH 314** Higher Mathematics (*in progress, 100%*) & **MATH 447** Real Analysis (*upcoming*) — proof techniques, metric spaces, compactness, Riemann integration.

MEng Electronic Engineering Durham University

Durham, United Kingdom
Sep 2020 – Jun 2024

- Upper Second-Class Honours (2:1). Dissertation: *Silicon Carbide JFET CPU* (see Research).

Experience

Graduate Communications Engineer Siemens PLC

Hebburn, United Kingdom
Sep 2024 – Present

- Built a Python RAG platform from scratch (local LLMs, vector search) over large technical corpora — cut engineer time-to-answer by >90%.
- Implemented C/C++ communication components (TCP/IP, serial) for digital-twin simulation.

Technical Skills

Stochastic control (BSDEs/BSDEJs, McKean-Vlasov & mean-field games, $HJB \leftrightarrow BSDE$) • probability & statistics • time-series & regression • Monte-Carlo & finite-difference numerics • optimisation • market microstructure / optimal market making • multi-agent RL (MADDPG) • Python (strong), C++, C, R • GPU/HPC • Lean 4
