Education

Mathematics Modules (NetMath)	Online (Urbana-Champaign, USA)
University of Illinois Urbana-Champaign	Apr 2026 – Dec 2026
• Credit-bearing, exam-assessed proof-based mathematics, studied alongside the MSc. • MATH 314 Introduction to Higher Mathematics (<i>in progress, 100%</i>) — logic, set theory, ε-δ arguments, proof techniques. • MATH 447 Real Analysis (<i>upcoming</i>) — sequences & convergence, metric spaces, compactness, continuity, differentiation, Riemann integration.	
MSc Scientific Computing & Data Analysis (AI for Engineering)	Durham, United Kingdom
Durham University	Sep 2025 – Exp. Sep 2026
• Tracking Distinction — average $\sim 86\%$ (95% performance/GPU, 94% machine learning & statistics). • Dissertation: Deep BSDEs for mean-field market making (Cont-Xiong), with Lean-verified error certification. • Focus: Bayesian inference, convex optimisation, deep learning, HPC/GPU. Python, C, R.	
MEng Electronic Engineering	Durham, United Kingdom
Durham University	Sep 2020 – Jun 2024
• Upper Second-Class Honours (2:1). • Dissertation: <i>Silicon Carbide JFET CPU</i> — simulation-driven CPU design with instruction-level verification.	

Experience

Industrial Tutor	Durham, United Kingdom
Durham University, Department of Engineering	Sep 2025 – Present
• Led weekly design tutorials, mentoring teams on feasibility-driven decision-making under cost, risk, and performance constraints. • Assessed and provided structured feedback on technical feasibility, assumptions, and justification quality.	
Graduate Communications Engineer	Hebburn, United Kingdom
Siemens PLC	Sep 2024 – Present
• Implemented and adapted C/C++ communication components (TCP/IP, serial) to support data exchange between simulated systems and PC-based engineering tools. • Developed a Python-based RAG pipeline to structure and query internal technical documentation and codebases using a retrieval-augmented workflow (local LLMs, vector search) reducing engineer time to answer by $>90\%$.	

Projects & Research

Deep BSDEs for Mean-Field Market Making	Durham, United Kingdom
Durham University	2026 – MSc Dissertation
• Built deep backward-SDE-with-jumps solvers for a competitive mean-field market-making game (Cont-Xiong), validated to 0.135% spread error vs an exact benchmark and scaled to $\sim 5,000$ agents. • Showed via a 20-seed multi-agent-RL study (MADDPG) that learning algorithms reach supra-cartel spreads ($t=3.22$, $p=0.0022$) — tacit collusion is a property of the learning dynamics, not the market equilibrium. • Developed an a-posteriori error-certification theory for deep-BSDE solvers and machine-checked its core in Lean 4 / Mathlib ($\sim 36k$ LOC, axiom-clean).	
Silicon Carbide JFET CPU	Durham, United Kingdom
Master's Dissertation	Oct 2023 – Apr 2024
• Independently designed and simulated a 4-bit CPU using SiC JFET logic in LTspice, targeting computation in extreme temperature and radiation environments.	

- Constructed a full verification toolchain (C++ compiler, assembler, Python automation) and validated instruction-level behaviour via emulator parity checks and waveform-based state reconstruction.
- Investigated architectural trade-offs, race conditions, and storage constraints, explicitly documenting assumptions, limitations, and scalability bottlenecks.

Certifications

- MITx 15.455x – Mathematical Methods for Quantitative Finance (In Progress)
- Columbia University – Introduction to Financial Engineering and Risk Management

Leadership, Activities & Interests

Research Interests: Time-series modelling, signal validation, regime dependence in financial systems.

Leadership: Bishops Diocesan College Fencing Team Captain; Durham Fresher Representative (2022–23).

Activities: Durham University Fencing Team; Boxing (Student Fight Night).

Achievements: South Africa U17 Fencing Champion & Weldon le Huray Scholar; President's Award (Gold).

Key Skills

Probability & Statistics; Numerical Methods; Optimisation; Monte Carlo Simulation; Python; C++;
High-Performance Computing; Linear Algebra
